Dear DEUNA team,

Large enterprises running payments across dozens of PSPs are bleeding money at every integration seam. I have seen the same problem from multiple sides, as the founder of Kvitt Payment Solutions, a P2P fintech acquired by Sparkasse and brought inside the girocard ecosystem, and as a product manager at companies ranging from a B2B insurance SaaS to a federal public-sector analytics platform. DEUNA's ATHIA platform is a infrastructure play, not a feature wrapper, and that is the kind of work I want to do next.

The checkout product role matches what I actually do. I mine analytics regularly, not when a stakeholder asks. At Rohde & Schwarz I instrumented two competing workflows and let the data kill the one the team was in love with, it had recorded exactly zero clicks. At CLINET Platforms I cut a backlog to the top 10% of features against agreed success metrics and user acceptance rose more than fivefold. At the Federal Employment Agency I introduced Dagster and dbt so quarterly data imports ran without hand-holding, saving 75% of the time per update. In each case the discipline was the same: agree what success looks like before building, measure it after, and let the numbers run the next prioritisation cycle.

I can build my own analysis. I write SQL to pull data beyond what an analytics tool exposes, I work in Amplitude-style funnel and cohort views without needing someone to hand me a dashboard, and I use Python for anything that benefits from scripting. I also prototype quickly in Lovable and Framer when I need to test an idea with a client before it touches the engineering backlog.

The payments and e-commerce context is not new territory for me. Kvitt ran inside the girocard network, which means I have lived PSP integration constraints, edge-case payment flows, and the reconciliation headaches that come with them. My Shopware implementation for AOK insurance touched the procurement and checkout side of e-commerce. DEUNA's 300+ PSP integrations and the reconciliation layer are a more complex version of problems I have already worked through.

I am based in Berlin, work fully remote, and am available on four weeks' notice. I would be glad to walk through a specific checkout scenario or past analytics work in a first call.

Best regards, *Philipp Hilbert*
