Dear MultiBank Group team,

I am applying for the Product Manager role focused on back-office capabilities. My background is thirteen years of owning product in regulated environments, payments, insurance, public-sector analytics, and defence AI, where the platform is always connected to compliance obligations and operational risk. That is the same terrain MultiBank operates in, just with trading accounts and MT5 where I have previously worked with KYC pipelines, PSP integrations, and status synchronisation across multi-entity setups.

The work described in the posting is familiar: translating operational requirements into PRDs and acceptance criteria, owning integrations between systems that each believe they are the system of record, and managing a vendor relationship where you cannot always ship what you want and have to be precise about what you ask for. At EMIL Group I owned a B2B SaaS insurance platform across 18 engineers, rebuilt a broken delivery organisation, and shipped the Claims Center from concept to production. At the Federal Employment Agency I carried a full ETL migration and a UI relaunch simultaneously while maintaining a live national analytics platform. Both required the same skill this role asks for: keeping interconnected systems stable while evolving them under operational pressure.

I have worked with REST APIs, webhooks, data flows, and reconciliation patterns as first-class product concerns rather than engineering details I hand off. At Rohde & Schwarz I instrumented competing data-pipeline workflows, cut rollout time from days to 30 minutes with GitOps, and increased pipeline runs by 200% by redirecting strategy based on what the usage data actually showed. I am comfortable in a technical discovery conversation with an architect and equally comfortable translating the outcome into a workflow a compliance officer can sign off on.

Payments is a strength. Kvitt Payment Solutions, which I co-founded, was acquired and operated by Sparkasse inside the girocard ecosystem. I have designed P2P payment flows, handled edge-case and exception logic, and worked through the operational side of a regulated payment product. I also have direct experience with KYC/AML integration design and multi-entity data flow problems from the insurance platform work at EMIL Group.

I am based in Berlin and actively targeting the UAE. I am ready to relocate to Dubai and work on-site, which removes any remote-work ambiguity from this conversation. I would welcome a call to go deeper on the MT5 lifecycle and vendor management aspects of the role.

Best regards, *Philipp Hilbert*
