Dear ThinkMarkets team,

I am applying for the Technical Product Owner role with a focus on FX and CFDs. I have 13 years of product ownership in regulated industries, and I spend real time in the FX and crypto markets as a practitioner, working with instruments like perpetual futures, spot pairs, and cross-chain execution across Hyperliquid, Bitget, and Jupiter. That gives me a starting point for prioritisation conversations that does not require a long on-ramp.

The job description calls out Claude and Claude Code as part of the daily workflow. I use both already: I draft user stories and acceptance criteria in Claude, run in-repo spec generation through Claude Code, and use Lovable for rapid front-end prototyping before handing anything to engineering. The requirement to review and validate AI outputs is one I take seriously. At Rohde & Schwarz I managed AI and data platform delivery for the FCAS programme, where governance and auditability of outputs were non-negotiable, so I have built that validation discipline into how I work.

My backlog ownership track record spans some demanding environments. At CLINET Platforms I inherited a five-person healthcare team with a roadmap it could not deliver. I cut it to the top 10% of features against agreed success measures, and user acceptance rose more than fivefold. At EMIL Group I restructured an 18-person delivery organisation that was losing engineers, brought attrition under control, and shipped the Claims Center from concept to production. At Bundesagentur für Arbeit I carried a full ETL migration and a UI relaunch in parallel while introducing Dagster and dbt, saving close to 75% of the time per data update.

The multi-initiative scope in this role matches how I have worked for the past several years. I can hold several parallel streams in view without losing sight of the business priority behind each one, and I keep stakeholders informed through clear sprint reviews and documented decision trails rather than status-update meetings that add no value.

I would welcome the chance to talk through how my background maps to the ThinkTrader platform roadmap and the AI-assisted delivery model you are building.

Best regards, *Philipp Hilbert*
