

Philipp Hilbert. *Supply-side product owner for a healthcare marketplace.*

Positioning, ten years of hands-on product ownership across regulated platforms, mobile apps, and AI-driven systems – now ready to own the doctari App and the professionals who depend on it.

§ WHY DOCTARI

Healthcare staffing is a structurally undersupplied market, and the supply side of a marketplace is exactly where product decisions compound fastest: onboarding friction, workflow fit, and trust signals all converge on retention and fill rates. The job description is explicit that AI adoption is a strategic priority, not a future consideration – that alignment with where I already operate is rare. The CLINET mobile healthcare app I shipped covered digital anamnesis, hospital information system integration, and patient-facing workflows, which means I have direct context for the constraints healthcare professionals work under on a shift. *That is exactly the environment where the gaps are invisible until a real user hits them, and where closing them creates disproportionate supply-side loyalty.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GPT**, discovery synthesis and user-story drafting
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy wireframes
- **Gamma.app**, stakeholder decks and workshop prep
- **GitHub Copilot**, development pairing across Python and JS
- **n8n**, agentic workflow automation

- **Cursor / VSCode**, LLM-assisted development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Django, JavaScript, AngularJS, Ionic, Kotlin (Spring Boot), PostgreSQL, MongoDB, Kubernetes, ArgoCD, Argo Workflows, OpenShift, Dagster, dbt, DuckDB, Jenkins, REST APIs, CGM API integration, Redpanda, Helm, GitOps pipelines, MicroStrategy, Bitbucket, Git.

§ HOW I WOULD WORK AT DOCTARI

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the supply-side acquisition and onboarding funnel end-to-end — from app-store install through first shift acceptance — and build an annotated journey map that names drop-off points, friction sources, and the one metric the team already knows is underperforming.

WEEK 2

Slice, validate, prioritise.

Run a structured discovery sprint with two or three healthcare professionals currently active on the platform to separate assumed pain points from the ones that actually cost shifts; map findings against the existing backlog and force a ranked shortlist.

WEEK 3+

Ship, measure, repeat.

Align engineering and design on the first two backlog items with clear acceptance criteria, lead refinement, and deliver the first release with a defined success metric attached so the next iteration has a baseline.

I COVER LETTER

Dear doctari team,

I am applying for the Product Owner role on the supply side of the doctari marketplace. The framing in your job description – full ownership of the doctari App, short decision paths, and active AI integration – maps directly to how I have worked across the last decade, and the healthcare context is one I have navigated before.

At CLINET Platforms, I built a mobile-first hospital app across iOS and Android, integrating CGM interfaces into hospital information system workflows and delivering patient-facing features including digital anamnesis, transport coordination, and document storage. The constraints of that environment – legacy APIs, external databases, clinical staff who have no tolerance for friction at the start of a shift – gave me a clear understanding of what it takes to earn and keep trust from healthcare professionals. That user group is exacting. They will abandon a product the moment it adds steps instead of removing them. Supply-side retention on a marketplace serving that group lives or dies on exactly that insight.

My broader product experience covers regulated B2B SaaS (Emil Group's InsurTech platform), AI data management platforms in a multinational defence programme (Rohde & Schwarz, FCAS), and public analytics infrastructure at the Federal Employment Agency. Across those environments I have owned full product development lifecycles – discovery, backlog management, sprint discipline, delivery, and post-release metric review – and have rebuilt team delivery cadence in organisations where it had broken down. At Emil Group I split a 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and brought a prototype-stage client relationship back to stability through weekly product workshops.

On AI integration specifically: this is not an aspiration for me, it is my current working mode. I use Claude Code, GitHub Copilot, Lovable, and n8n daily for prototyping, spec generation, and autonomous workflow automation. At Rohde & Schwarz I owned a central AI data management platform with SafeAI and ExplainableAI requirements and delivered autonomous feature sets end-to-end including GitOps rollout. I can translate between an engineering team's architectural constraints and a product vision that includes AI features, because I have worked on both sides of that boundary.

I am a native German speaker, fluent in English, based in Berlin, and available within four weeks of an offer. I would welcome a conversation about the supply-side roadmap and where the highest-leverage work sits right now.

Best regards, *Philipp Hilbert*

§ BEARING

Product Manager and Product Owner with ten years of experience shipping mobile apps, AI data platforms, B2B SaaS, and regulated analytics systems. At doctari, that background converges on a single outcome: a supply-side app that healthcare professionals open willingly, trust operationally, and recommend to colleagues. Comfortable leading full product development lifecycles from discovery through release, aligning cross-functional teams under delivery pressure, and driving AI adoption both inside the product and inside the development process itself.

§ CORE STRENGTHS

- Supply-side marketplace product ownership and user retention
 - Full product lifecycle: discovery, backlog, delivery, release, metrics
 - AI-native workflow execution and feature integration
 - Mobile app product ownership in healthcare workflows
 - Cross-functional alignment across engineering, design, and business stakeholders
 - Data-driven prioritisation and KPI-oriented backlog management
 - Sprint discipline, team restructuring, and delivery stability restoration
 - Technical fluency enabling peer collaboration with engineering
 - Founder-level pragmatism: high agency, low ego, fast decisions
-

§ PROFESSIONAL EXPERIENCE

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on iOS and Android
- Integrated CGM interface into hospital information system (KIS) workflows, navigating legacy API constraints
- Built stakeholder trust through transparent communication of technical complexity under tight deadlines
- Led a small cross-functional team with strict focus on highest-leverage features for clinical staff

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Split a bloated 17-person team into smaller Scrum units and reintroduced sprint discipline, velocity tracking, and ownership concepts
- Designed and delivered a Claims Center module from concept to production rollout
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned a central AI and data management platform for multimodal datasets within the FCAS European defence programme
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Led a cross-functional team of architect, data scientists, backend and frontend engineers, and QA across multinational stakeholders

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor analytics platform with new features including labour shortage analytics and flexible regional comparison
- Introduced Dagster for automated ETL and indicator generation; migrated legacy systems to Kubernetes
- Served as Deputy IT Security Officer (IT-SV) with responsibility for compliance, governance, and data lineage
- Standardised CI/CD with full test integration at build time

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware

- Designed for non-technical end users: setup under two minutes, no technical knowledge required
- Served as deputy IT security officer; responsible for attack vector mitigation and security product positioning

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Founded a group-based P2P payments product on a P2P backbone; owned full UX/UI design and mobile app prototype
- Integrated PSP and designed payment edge-case handling; product later acquired and operated by Sparkasse
