

Philipp Hilbert. *Trust infrastructure PM who has shipped data provenance at scale.*

Positioning, product manager with a decade of technical depth and a track record in AI data governance, security products, and regulated platform delivery – ready to do it again for AI agent trust.

§ WHY AFFINIDI

The Trust Fabric framing – verifiable identity, policy guardrails, and real-time observability for AI agents – is one of the more precise problem statements I have come across in this space. Most organisations are still hand-waving about "responsible AI"; Affinidi is building the plumbing that makes governance real. The specific mention of bridging proof-of-concept deployments to secure production systems resonates directly with work I did at Rohde & Schwarz on the FCAS programme, where the same gap existed between research-grade ML pipelines and anything a multinational stakeholder could rely on in production. The developer-obsessed angle – understanding integration pain, API usability, and the full experience of someone building on top of the platform – is exactly where I tend to spend my energy. *That is the kind of work that compounds over time and actually changes how a technology gets adopted.*

§ HONEST FRAMING

Decentralised identity protocols and verifiable credentials as a formal specification layer – W3C DIDs, credential schemas, selective disclosure – are adjacent to security product work I have done but not a domain I have shipped production features in directly. What I do bring is a strong mechanic for exactly that situation: I held a deputy IT security officer role, owned a quantum-

resistant encryption product from concept to customer, and have consistently closed the gap between technical depth and product clarity when the domain was new to me.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
 - **GitHub Copilot**, pair-programming and boilerplate acceleration
 - **GPT**, edge-case generation and discovery synthesis
 - **Cursor/VSCoDe**, day-to-day development environment
 - **Lovable**, rapid front-end prototyping
 - **n8n**, multi-agent workflow orchestration
 - **Framer**, design-heavy mockups and concept validation
 - **Gamma.app**, stakeholder presentations and discovery artefacts
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, GitOps pipelines, Dagster, dbt, DuckDB, Redpanda, Django, AngularJS, Ionic, MicroStrategy, CI/CD with integrated test gates, CGM API integration.

§ SIDE PROJECT

CRYPTO BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Personal infrastructure project building an algorithmic backtesting and signal-evaluation framework for digital asset markets.

- Implements a file-queue-based agent loop that ingests market microstructure data and evaluates execution signals across perpetual and spot venues.
- Architecture separates data ingestion, signal computation, and risk evaluation into discrete, testable pipeline stages – deliberately mirrors production ETL thinking.
- Draws on hands-on experience across Hyperliquid, Bitget, Jupiter, 1inch, and Across Protocol to ground signal logic in real execution constraints.

- Demonstrates the same structured-requirements-to-implementation discipline the Trust Fabric team needs when taking AI agent governance from concept to production.
-

§ HOW I WOULD WORK AT AFFINIDI

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit with engineers reviewing the Trust Fabric architecture – identity issuance flows, policy evaluation paths, observability hooks – and map where the product and implementation contracts are well-defined versus where they are still open questions the team is carrying implicitly.

WEEK 2

Slice, document, align.

Pick one under-specified area surfaced in week one, write a crisp problem statement with clear acceptance criteria, and walk it through the team to test whether the framing holds – adjusting until the engineers and go-to-market stakeholders are pulling in the same direction.

WEEK 3+

Ship, observe, iterate.

Get the first incremental deliverable into developers' hands, establish a feedback loop with early integrators, and close the loop between observed pain points and the next slice – building the rhythm the team needs to move from proof of concept to production at pace.

I COVER LETTER

Dear Affinidi team,

The job description for this role describes a problem I recognise precisely: organisations that have promising AI systems but cannot move them to production because trust, governance, and verifiable accountability are not built into the infrastructure. At Rohde & Schwarz, I spent over a year inside that exact gap – on the FCAS European defence programme, I owned a central AI data management platform where the core challenge was not building ML capability but making ML trustworthy: reproducible pipelines, full data provenance, SafeAI and ExplainableAI evaluation concepts, and audit trails that multinational stakeholders could actually rely on. The

vocabulary in your description of Trust Fabric – verifiable identity, policy guardrails, real-time observability – maps directly to the product problems I was solving there.

What I bring to a role like this is a combination that is harder to find than either half alone: genuine technical depth and genuine product discipline. At Rohde & Schwarz I unblocked infrastructure-level issues in OpenShift independently and delivered in one week a feature the project lead had been requesting from engineers for over a year. At the Federal Employment Agency I served as Deputy IT Security Officer while simultaneously owning the product roadmap for a public analytics platform, running ETL modernisation with Dagster, and migrating legacy systems to Kubernetes. At Qcrypt AG, as a co-founder and Product Owner, I owned a quantum-resistant encryption product from architecture through to customer-ready packaging – with a stated goal of setup under two minutes and no technical knowledge required. Security products that non-experts can actually use is a design constraint I have worked under before.

Your emphasis on being developer-obsessed resonates. The most consequential product decisions I have made have come from sitting close enough to implementation to understand the trade-offs: reviewing flows, investigating issues, reading the code when necessary. At Emil Group, where a prototype-stage InsurTech platform had lost client trust and was haemorrhaging senior engineers, I regained both by running structured weekly product workshops and rebuilding sprint discipline from the ground up – while also splitting a bloated 17-person team into smaller units with clear ownership. That kind of work requires technical credibility and stakeholder communication in roughly equal measure.

I am based in Berlin and genuinely interested in the domain. The shift from centralised identity to decentralised, verifiable credentials for AI agents is one of the more interesting structural changes happening in the infrastructure layer right now, and Affinidi is positioned at an interesting point in that transition. I would welcome the conversation.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Senior Product Manager with nearly ten years of experience delivering technical platform products in regulated, ambiguous, and high-pressure environments. Track record spans AI data governance for defence programmes, public analytics infrastructure, B2B InsurTech SaaS, security products with quantum-resistant encryption, and mobile healthcare – always in close collaboration with engineering and always with clear ownership of outcomes. Comfortable

working at the intersection of technical architecture and product strategy, and experienced in security and identity-adjacent domains from both a product and a compliance perspective. Brings founder-level agency, low ego, and a consistent bias toward getting working software into users' hands before iterating.

§ CORE STRENGTHS

- Translating complex technical requirements into clear, dev-ready product decisions
 - Data provenance, audit trails, and SafeAI governance product ownership
 - Security product design including quantum-resistant encryption and IT security officer experience
 - API-first platform thinking and developer experience orientation
 - Delivery ownership in ambiguous, fast-moving environments
 - Cross-functional alignment across engineering, data science, compliance, and executive stakeholders
 - ETL and data pipeline product design (Dagster, dbt, DuckDB)
 - Sprint discipline, backlog management, and team restructuring
 - AI-native product execution and autonomous feature delivery
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned data provenance, audit trails, and transparency for AI/ML training datasets on the FCAS European defence programme – directly analogous to Trust Fabric's observability and governance requirements.
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout.
- Enabled ML training and evaluation on curated datasets with transparent evaluation concepts (SafeAI, ExplainableAI).
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD.
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature the project lead had been requesting from engineers for over a year.
- Led a cross-functional team including architect, data scientists, backend and frontend engineers, and QA.

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Served as Deputy IT Security Officer (IT-SV) with focus on compliance, governance, and data lineage – experience directly relevant to policy guardrails and regulated AI deployment.
- Introduced Dagster for automated ETL and indicator generation; modernised CI/CD with integrated test gates.
- Delivered labour shortage analytics, flexible regional comparison tools, and modernised admin tooling.
- Migrated legacy systems to Kubernetes and managed major system upgrades.
- Standardised CI/CD with full test integration at build time.

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation on a B2B SaaS platform.
- Designed and delivered a Claims Center module from concept to production rollout.
- Re-established sprint discipline; split a bloated 17-person team into smaller Scrum units with clear ownership and deputy concepts.
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops.
- Reduced senior developer attrition from near-total to a single departure.

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on iOS and Android under tight deadlines.
- Integrated CGM interface into hospital information system workflows.
- Built stakeholder trust through transparent communication of technical complexity including legacy APIs and external database constraints.

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Co-Founder & Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware – security product from concept to customer-ready packaging.
- Designed for setup under two minutes with no technical knowledge required; combined security depth with usability as a hard design constraint.
- Served as deputy IT security officer; responsible for attack vector analysis and product security posture.

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payments product on a P2P backbone, including PSP integration, full UX/UI design, and mobile app prototype.
- Product later acquired and operated by Sparkasse.

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO & Head of HR / CFO / Project Manager

- Full establishment of digital tooling, financial and investment planning, nanotechnology development, and investor relations across multiple roles over five years.
