

Philipp Hilbert. *Consumer trading PM with a live crypto stack.*

Positioning, ten years of product delivery in regulated, data-heavy environments, now applied to a consumer trading platform where the candidate trades and builds on every day.

§ WHY KRAKEN

Kraken is one of the few platforms where the consumer layer, spot, staking, OTC, xStocks, is complex enough to demand genuine product depth, not just UX polish. The job description is explicit that PMs are expected to prototype with Claude Code and Cursor before writing specs, which is exactly how I have worked for the past two years. The opportunity to own a product that a retail trader actually opens every morning, one that crosses asset classes from equities to perpetuals, is the kind of problem set where continuous discovery and cheap prototype experiments pay off at scale. *That is precisely the environment where building and trading on the same platform stops being a coincidence and starts being a structural advantage.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo feature prototyping and spec generation
- **Lovable**, full clickable prototypes before a single spec line
- **Cursor / VSCode**, daily driver for agentic code tasks
- **GitHub Copilot**, assisted delivery across Python and Kotlin
- **GPT**, edge-case generation and copy iteration
- **Framer**, design-heavy flows and interactive mockups
- **n8n**, multi-agent and automation workflow orchestration
- **Gamma.app**, stakeholder decks and roadmap communication

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin, JavaScript, PostgreSQL, MongoDB, REST APIs; Kafka for event streaming; Dagster and dbt for ETL orchestration; Kubernetes, OpenShift, ArgoCD, Helm, Jenkins, and GitLab for delivery pipelines; Shopware for e-commerce; WhatsApp and Telegram APIs for consumer-facing messaging; LLM agents under custom guardrails; Jira and Confluence throughout.

§ HOW I WOULD WORK AT KRAKEN

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow support tickets, session recordings, and the analytics dashboards to map where users drop between onboarding and first trade, and where the convert flow loses them across asset classes.

WEEK 2

Prototype, slice, validate.

Pick the single highest-uncertainty gap from week one, build a clickable prototype in Lovable or Framer, and walk it through three to five real users before writing a word of spec.

WEEK 3+

Ship, measure, close.

Hand the validated slice to engineering with clear acceptance criteria, define the metric that will tell us it worked, and run UAT myself, the job description is explicit that the PM owns that loop.

I COVER LETTER

Dear Kraken Consumer Trading team,

I have been a retail crypto user for eight years. I trade perpetuals on Hyperliquid, route spot through Jupiter and 1inch, bridge via Across Protocol, and track liquidation clusters on Coinglass and Hyblock Capital. I am not describing a hobby; I am describing the user you are

trying to serve, and the lens I would bring to every prioritisation call. When a feature debate gets abstract, I can close it with a screen recording of my own session on the product.

The job description asks for someone comfortable prototyping with Claude Code and Cursor before writing specs. This is already my default mode. At construct8, a disputed onboarding flow became a working prototype in a single afternoon, tested with real tradespeople before any engineer opened a ticket. At Rohde & Schwarz, I used the same approach on a defence AI data platform to reframe a UI-heavy product into a dev-code-friendly interface, cutting rollout time from days to thirty minutes. The tool changes; the discipline of resolving uncertainty with the cheapest possible instrument before committing engineering capacity does not.

Kraken's consumer surface, spot, staking, xStocks, futures, OTC, is exactly the kind of cross-asset complexity that rewards a PM who understands the mechanics underneath. I actively trade across CEX and DEX venues, study slippage, price impact, and market microstructure, and I am developing a personal backtesting engine for crypto strategies. This is not background knowledge; it is ongoing practice that keeps my product instincts calibrated to what retail traders actually experience, not what they say in surveys.

On the operational side, the role requires close collaboration with Finance and Operations to maintain business continuity, a pattern I know from Bundesdruckerei (RKI's national health data platform, identity management, the highest privacy requirements) and from Scheidt & Bachmann (POS and payment systems in a SAFe programme with PI planning and release trains). Regulated, high-stakes, cross-functional. The compliance and continuity muscle is already trained.

I would be glad to walk through a specific feature proposal, a discovery framework, or a prototype, whichever gives you the clearest signal on fit.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Ten years building software products in regulated, data-heavy environments, defence AI, national health infrastructure, InsurTech, consumer payments, now directed at consumer trading. Deep crypto domain knowledge, active on CEX and DEX venues, combined with a working practice of AI-assisted prototyping that ships validated ideas before engineering capacity is committed.

§ WHAT I CAN DO

Product craft. Continuous discovery, prototype-led validation, outcome negotiation with stakeholders, backlog and release ownership, SAFe at scale (PI planning, release trains), metric definition before build.

Web3 and trading. CEX/DEX mechanics, perpetual futures, DEX aggregation, bridging, liquidation analytics, market microstructure, personal backtesting engine in active development.

Data and AI platforms. Multimodal AI training data pipelines, ETL orchestration and migration, analytics platforms for public use. Kafka, Python, Kotlin, Dagster, dbt, LLM agents.

AI-first building. I own production code without writing it: Claude Code, GitHub Copilot, Lovable for full prototyping, agent frameworks under my own guardrails.

Cloud, delivery and operations. Bare-metal to container migration, rollout and hotfix pipelines, GitOps. Kubernetes, OpenShift, ArgoCD, Jenkins, Git, GitLab, Azure DevOps.

Integration and platforms. Clinical interfaces (CGM/KIS), payment and forecourt systems, e-commerce platforms (Shopware), messaging APIs (WhatsApp, Telegram).

Regulated environments. Defence, public sector, health data and insurance: identity management, highest privacy requirements, audit and governance cycles.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one consumer operations; AI-assisted prototyping cuts disputed flows to same-day clickables. WhatsApp/Telegram APIs, LLM agents.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Multimodal AI training data unified to one standard; rollout cut from days to 30 min, fully hotfix-capable; steered product from UI-heavy to dev-code-friendly. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Public labour-market data made searchable, filterable, and social-media-ready; bare-metal-to-container migration and big ETL replatform. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Insurers launching products in days; Claims Center shipped; 17-person team restructured into three nimble squads with leads.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android; integrated the CGM/KIS clinical interface personally.

BUNDESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics and viral-mutation tracking; identity management, highest privacy standards.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION 2020 TO 2021

POS, payment, and forecourt systems; SAFe: PI planning and release trains.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019 TO 2020

Full legacy-to-Shopware migration for ~20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation: end devices, servers, network, software.

§ FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt (mobile payments, acquired by Sparkasse) · Qcrypt (quantum encryption, Product Owner) · Smart Soil Technologies (nanotech)
