
Philipp Hilbert. *Senior AI Product Manager bridging enterprise technology and measurable outcomes.*

Positioning, ten years delivering B2B digital products from discovery through launch, now applying an AI-native working method to build enterprise and government products that create tangible value.

§ WHY HALIAN / THIS ORGANIZATION

The posting describes an organization that builds next-generation AI-powered products for enterprise and government clients with an AI-native mindset, which is exactly the operating mode I have developed across defence, public sector, insurtech, and health data. The requirement to translate ambiguous business challenges into clear product requirements and roadmaps, then manage delivery across engineering and design, maps directly to what I have done at Rohde & Schwarz (FCAS defence AI platform) and Bundesagentur für Arbeit (public analytics platform). The explicit callout of AI agents, LLMs, RAG architectures, and automation as capability areas the team is building with, not experimenting with, signals a level of technical seriousness I find rare and attractive. *That is exactly the environment where my strengths compound.*

§ HONEST FRAMING

I have not worked in smart cities, IoT, or digital healthcare as a primary domain. The transferable mechanic is strong: I have delivered large-scale government data platforms (RKI vaccination tracking, public labour-market analytics) and regulated enterprise integrations under audit and privacy constraints, the structural challenge is identical, the domain vocabulary is learnable.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
 - **GitHub Copilot**, inline coding acceleration
 - **Lovable**, full front-end prototyping without a dev
 - **Framer**, design-heavy prototype work
 - **GPT**, research, edge-case generation, PRD drafting
 - **n8n**, multi-agent and automation workflow design
 - **Gamma.app**, executive-ready presentation from rough notes
 - **Cursor / VSCode**, day-to-day development environment
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kafka, Python, Kotlin, Dagster, dbt, DuckDB, PostgreSQL, MongoDB, REST APIs, Kubernetes, OpenShift, ArgoCD, Helm, Terraform, Jenkins, GitLab, Azure DevOps, Docker, Shopware, WhatsApp/Telegram APIs, LLM agents, CGM/KIS clinical interfaces, POS and forecourt payment systems.

§ HOW I WOULD WORK AT THIS ORGANIZATION

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the active client engagements, read existing PRDs and roadmaps, map where discovery is continuous and where it is treated as a one-time phase, specifically identifying which AI capability bets currently lack a measurable success definition.

WEEK 2

Sharpen the backlog.

Pick the highest-uncertainty item on the roadmap, run a structured risk-framing session (value, usability, feasibility, viability) with engineering and design, and propose the cheapest instrument, prototype, spike, or pilot, to resolve it.

Ship and close loops.

Drive the first end-to-end delivery cycle: user story through staging through client sign-off, with a retrospective that turns delivery data into backlog priority signals for the next sprint.

I COVER LETTER

To the hiring team at Halian,

The role you have described, an AI Product Manager who owns product definition for enterprise and government clients, bridges business and engineering, and leverages AI tools to accelerate delivery, is precisely the position I have been building toward across a decade of product work in regulated, high-stakes environments. I would like to make the case that I can step into this role and contribute from day one.

The central challenge in AI product management is not knowing which models to use. It is knowing when to use AI at all, how to evaluate its limitations honestly for a given business problem, and how to translate that evaluation into a product decision a government stakeholder or enterprise client will trust. At Rohde & Schwarz, I owned the product for a defence AI training data platform under the FCAS programme. That required me to work with multimodal AI pipelines at production scale, define the data provenance and audit requirements that made the output acceptable to defence clients, and steer the product from a UI-heavy architecture to a developer-code-friendly one, a decision that cut rollout time from days to thirty minutes. The technical judgment, the stakeholder communication, and the delivery discipline are all present in that single example.

Client-facing communication with senior and executive audiences is a recurring requirement in this posting. I have run PI planning events and release train reviews at Scheidt & Bachmann, presented public analytics platform strategy to Bundesagentur für Arbeit leadership, and navigated the privacy and identity governance conversations that come with national health data work at Bundesdruckerei. I am comfortable in rooms where the audience is senior, the stakes are high, and the product position needs to be defended with data rather than slides. A spoken English sample is available at [youtube.com/watch?v=nt06f71lgfE](https://www.youtube.com/watch?v=nt06f71lgfE), a product presentation I gave for Qcrypt AG's quantum-encryption product.

On the AI-native tooling requirement: I use Claude Code, GitHub Copilot, Lovable, and n8n in production workflows, not as experiments. A disputed user flow becomes a clickable prototype inside a day. PRDs and edge-case libraries are generated with LLM assistance and then reviewed for accuracy, not the reverse. This working mode is now part of my current role at construct8, where I am taking a zero-to-one construction marketplace to market using WhatsApp and Telegram APIs alongside LLM agents. The ability to move fast at definition and validation stage,

then hand a well-specified product to engineering, is exactly what an AI-native organization needs from a senior PM.

Abu Dhabi is not a compromise location for me. I am actively targeting the UAE and am prepared to relocate on short notice. I understand that enterprise and government clients in the Gulf operate on relationship cadences and communication norms that differ from European markets, and I am genuinely interested in learning that context rather than projecting a European product playbook onto it.

I would welcome a conversation about the specific client engagements and product areas this role will focus on.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Ten years delivering B2B digital products across defence, public sector, insurtech, and health data, always in regulated environments where trust, audit, and governance are non-negotiable constraints rather than afterthoughts. My working mode is AI-native: I own production-ready products without writing the production code, using agent frameworks and rapid prototyping to compress the time between ambiguous brief and validated requirement. I move comfortably between executive stakeholder conversations and engineering architecture discussions, and I hold both accountable to a defined outcome rather than an output list.

§ WHAT I CAN DO

Product craft. Continuous discovery, prototype-led validation, outcome negotiation with stakeholders, backlog and release ownership, SAFe at scale (PI planning, release trains), metric definition before build.

AI-first building. I own production code without writing it: Claude Code, GitHub Copilot, Lovable for full prototyping, agent frameworks under my own guardrails.

Data and AI platforms. Multimodal AI training data pipelines, ETL orchestration and migration, analytics platforms for public use. Kafka, Python, Kotlin, Dagster, dbt, LLM agents.

Cloud, delivery and operations. Bare-metal to container migration, rollout and hotfix pipelines, GitOps. Kubernetes, OpenShift, Red Hat, ArgoCD, Jenkins, Git, GitLab, Azure DevOps.

Regulated environments. Defence, public sector, health data and insurance: identity management, highest privacy requirements, audit and governance cycles.

Integration and platforms. Clinical interfaces (CGM/KIS), payment and forecourt systems, e-commerce platforms (Shopware), messaging APIs (WhatsApp, Telegram).

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one marketplace, AI-assisted operations; WhatsApp/Telegram APIs and LLM agents driving core workflows.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Multimodal AI training data into one homogeneous standard; rollout time cut from days to 30 minutes, fully hotfix-capable; product steered from UI-heavy to dev-code-friendly. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Public labour-market data made searchable, filterable, and social-media-ready; bare-metal-to-container migration, UI relaunch, and large ETL migration. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Insurers launch products in days rather than months; Claims Center launched; 17-person team restructured into three focused teams with leads.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android app; integrated the CGM/KIS clinical interface directly.

BUNDESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics and viral-mutation tracking; identity management under highest privacy requirements.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION 2020 TO 2021

POS, payment, and forecourt systems; SAE: PI planning and release trains.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019
TO 2020

Full legacy webshop migration to Shopware for approximately 20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation: end devices, servers, switches, lines, and software.

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT · PRODUCT OWNER · MOBILE PAYMENTS ACQUIRED BY SPARKASSE

P2P mobile payment product; acquired by Sparkasse.

QCRYPT · PRODUCT OWNER · QUANTUM-RESISTANT ENCRYPTION

Owned backup, restore, checkpoint, and data-encryption product architecture; quantum-resistant OTP/true-RNG stack.

SMART SOIL TECHNOLOGIES · CO-FOUNDER · NANOTECH

Early-stage agritech venture.

§ LANGUAGES

German, native. English, C2.
