§ WHY HALIAN

The role asks for someone who can translate complex business workflows into clear development tasks while keeping stakeholders, engineering, QA, design, business, aligned around a single backlog. That is precisely the work I have done across defence, health-tech, public-sector, and insurtech programs. The explicit mention of regulated industries as a preferred qualification resonates: I have owned product in environments governed by identity management, highest-privacy data requirements, and compliance audit cycles. And the on-site Abu Dhabi requirement is one I am actively seeking out, not tolerating. *That is exactly the environment where my strengths compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo spec and refactor work
- **Lovable**, rapid clickable prototypes from user stories
- **Framer**, design-heavy wireframes and concept walkthroughs
- **GitHub Copilot**, accelerated acceptance-criteria drafting
- **GPT**, stakeholder communication drafts and edge-case generation
- **Jira**, backlog and sprint management
- **Miro**, workflow mapping and retrospectives
- **Figma**, reviewing and annotating design artefacts

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

WhatsApp and Telegram messaging APIs, LLM agents, Kafka, Kotlin, Python, Dagster, dbt, Kubernetes, OpenShift, ArgoCD, Jenkins, Git, GitLab, Azure DevOps, Shopware, CGM/KIS clinical interfaces, POS and payment systems, PostgreSQL, MongoDB, REST APIs.

§ HOW I WOULD WORK AT HALIAN

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit in on every Agile ceremony as observer, read the backlog top-to-bottom, and map the current workflow end-to-end in Miro so I can name the three biggest prioritisation ambiguities before I write a single new ticket.

WEEK 2

Refine, slice, align.

Run a focused backlog-refinement session with engineering and design, converting vague epics into user stories with measurable acceptance criteria, and agree on the first sprint's definition of done with stakeholders.

WEEK 3+

Ship, track, improve.

Lead sprint ceremonies end-to-end, track delivery against KPIs agreed in week two, and feed the retrospective with real data, velocity, defect-to-fix time, customer satisfaction signals, so the team improves on evidence, not intuition.

I COVER LETTER

Dear Hiring Team,

I am applying for the Product Owner role at Halian in Abu Dhabi. Ten years of product ownership across defence, health-tech, insurtech, and public-sector SaaS programmes have given me the backlog discipline, stakeholder management skills, and regulated-environment

experience the posting describes. Abu Dhabi specifically is a location I am actively pursuing, so the on-site requirement is a positive.

The job description centres on two capabilities: translating complex business workflows into actionable development tasks, and keeping cross-functional teams aligned around a prioritised backlog. Both sit at the core of what I have done across my career. At EMIL Group, I broke a sprawling 17-person team into three focused squads, each with a lead and a sharp outcome scope, and shipped the Claims Center module within the same quarter. At Rohde & Schwarz, I steered a defence AI data platform from UI-heavy to developer-code-friendly while keeping a Kafka/Kotlin/Python engineering team and a set of demanding military programme stakeholders moving together, reducing rollout time from days to thirty minutes and making the release pipeline fully hotfix-capable.

Regulated environments are explicitly listed as preferred. I have owned product at Bundesdruckerei on the RKI national health data platform (vaccination statistics, viral-mutation tracking, identity management under the highest German privacy standards) and at Bundesagentur für Arbeit on a public analytics platform requiring compliance with public-procurement and accessibility obligations. I understand that in these environments, an acceptance criterion is not a suggestion and governance sign-off is a hard dependency, not a ceremony.

On tooling: the posting names Jira, Miro, and Figma. I use all three daily, alongside Claude Code and Lovable for prototype-speed validation, a disputed flow becomes a clickable demo in a day, which shortens the stakeholder alignment cycle considerably.

I am available on four weeks' notice and willing to relocate to Abu Dhabi for the duration of the contract. I would welcome a conversation about the programme and team setup.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Owner and Product Manager with ten-plus years delivering complex digital programmes across regulated, cross-functional environments. Known for breaking large, ambiguous backlogs into shippable increments, restructuring delivery teams around clear outcome ownership, and keeping business stakeholders and engineering in genuine alignment rather than managed separation. Effective in both greenfield and legacy-migration contexts.

§ WHAT I CAN DO

Product craft. Continuous discovery, prototype-led validation, outcome negotiation with stakeholders, backlog and release ownership, SAFe at scale (PI planning, release trains), metric definition before build.

Regulated environments. Defence, public sector, health data and insurance: identity management, highest privacy requirements, audit and governance cycles.

Integration and platforms. Clinical interfaces (CGM/KIS), payment and forecourt systems, e-commerce platforms (Shopware), messaging APIs (WhatsApp, Telegram).

AI-first building. I own production code without writing it: Claude Code, GitHub Copilot, Lovable for full prototyping, agent frameworks under my own guardrails.

Data and AI platforms. Multimodal AI training data pipelines, ETL orchestration and migration, analytics platforms for public use. Kafka, Python, Kotlin, Dagster, dbt, LLM agents.

Cloud, delivery and operations. Bare-metal to container migration, rollout and hotfix pipelines, GitOps. Kubernetes, OpenShift, ArgoCD, Jenkins, Git, GitLab, Azure DevOps.

Working tools: Jira, Confluence, Miro, Figma.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one build; AI-assisted operations; WhatsApp/Telegram APIs and LLM agents as core product surface.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Multimodal AI data normalised to one training standard; rollout cut from days to 30 min, fully hotfix-capable; product repositioned from UI-heavy to dev-code-friendly. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Labour-market data made searchable, filterable, and social-media-ready; bare-metal-to-container migration and large ETL migration completed. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Claims Center launched; 17-person monolithic team restructured into three focused squads with leads.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android app; integrated the CGM/KIS clinical interface directly.

BUNDESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics and viral-mutation tracking under highest-privacy identity management.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION 2020 TO 2021

POS, payment, and forecourt systems delivered via SAFe: PI planning and release trains.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019 TO 2020

Legacy webshop migrated to modern Shopware application for approximately 20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation: end devices, servers, switches, lines, and software.

§ FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt (mobile payments, acquired by Sparkasse) · Qcrypt (encryption, quantum-resistant) · Smart Soil Technologies (nanotech)
