

Philipp Hilbert. *Trading product builder who understands the infrastructure beneath the chart.*

Positioning, 10+ years of PM across fintech, regulated data platforms, and AI-native tooling, ready to own the trading product lifecycle at FundedNext from discovery through release.

§ WHY NEXT VENTURES

FundedNext's model is one of the more interesting commercial bets in retail fintech right now: capital allocation tied to verifiable performance rather than upfront fees is a fundamentally different risk structure, and building the product layer that makes that work at 220,000 daily users across 170 countries is a genuinely hard problem. The requirement that the PM carry "sufficient technical literacy in AI technologies to distinguish feasible solutions from impractical ideas" is a signal that the team has been burned before, and it is the right filter. My own experience spans multi-agent orchestration, agentic workflow design, and daily LLM-assisted delivery, so that bar is one I clear without stretching. *That is exactly the kind of environment where precision in backlog triage and honest feasibility assessment compounds fastest.*

§ HONEST FRAMING

My direct experience with MT5, cTrader, or brokerage execution infrastructure is as a serious retail user and analyst, not as a PM who has shipped features inside those platforms. What transfers cleanly is the pattern work: payment flow product design, API integration ownership, regulatory-aware prioritisation, and deep comfort with market microstructure from years of active crypto trading, liquidation analysis, and building a personal backtesting engine.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo feature delivery and spec generation
- **GitHub Copilot**, accelerated engineering review and pairing
- **Lovable**, rapid clickable prototyping before sprint commitment
- **Cursor / VSCode**, LLM-assisted code ownership
- **n8n**, multi-agent and agentic workflow orchestration
- **Framer**, design-heavy interface mockups
- **GPT**, structured user-story and edge-case drafting
- **Gamma.app**, stakeholder-facing roadmap and discovery decks

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin, PostgreSQL, MongoDB, REST APIs, Kafka, Dagster, dbt, Kubernetes, ArgoCD, Helm, OpenShift, Docker, Jenkins, GitOps, Shopware, WhatsApp/Telegram APIs, LLM agent frameworks, DuckDB, distributed data pipelines, Azure DevOps, Jira, Confluence.

§ SIDE PROJECT

CRYPTO BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Personal algorithmic trading infrastructure built from scratch to validate execution hypotheses.

- Ingests and normalises historical trade data across CEX venues including Bitget and Hyperliquid for strategy replay.
- Architecture is file-queue-based with Python core, designed to plug into the same agent loop pattern used in the multi-agent orchestration work at construct8.
- Feeds strategy ideas derived from liquidation heatmap analysis on Coinglass and Hyblock Capital.
- Directly relevant to NEXT Ventures' need for a PM who can evaluate engine feasibility claims from the engineering side, not just accept them.

§ HOW I WOULD WORK AT NEXT VENTURES

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow ops, compliance, and engineering to trace one full user journey through the trading platform, from challenge setup through funded account payout, and map every hand-off where the product creates friction or delay.

WEEK 2

Slice and prioritise.

Take the friction map into a structured RICE pass against current OKRs, identify the one backlog item where a cheap prototype or API sandbox test resolves the largest open uncertainty, and get it in front of a real user.

WEEK 3+

Ship, measure, close.

Own the first end-to-end release cycle: user stories finalised, acceptance criteria signed, QA coordinated, internal rollout run, and a success metric defined before build, not after.

I COVER LETTER

Dear Hiring Team at NEXT Ventures,

The trading product role at FundedNext caught my attention precisely because it combines two things that rarely appear together in a single job description: the operational rigour of a regulated brokerage environment and an explicit expectation that the PM understands agent frameworks and LLM feasibility at a technical level. That combination describes the work I am already doing.

Over the last decade I have owned product for a defence AI data platform at Rohde & Schwarz, a national health data infrastructure at Bundesdruckerei, a public analytics platform for Bundesagentur für Arbeit, and most recently a zero-to-one marketplace at construct8 where I deliver production features using Claude Code, Lovable, and a multi-agent n8n stack. Across those environments the constant has been cross-functional delivery under real constraints, regulatory, technical, and commercial, not in spite of them. At Rohde & Schwarz I shortened rollout time from days to 30 minutes while steering a multimodal AI data pipeline from a UI-

heavy architecture to one developers could extend themselves. At EMIL Group I diagnosed a 17-person team that was shipping slowly, split it into three mission-aligned squads, and launched Claims Center within the same planning cycle.

My crypto background is hands-on and infrastructure-oriented. I actively trade perpetual futures and spot across Hyperliquid, Bitget, Jupiter, and 1inch, study execution quality using Coinglass and Hyblock Capital liquidation analytics, and have built a personal Python backtesting engine to validate strategy ideas before committing capital. I understand slippage, price impact, routing, and market microstructure not as vocabulary but as the mechanics I interact with every week. That background means I can translate between a trading operations team and an engineering team without a glossary in between, which is exactly what the PM role at FNmarkets requires.

On the AI literacy bar: I do not just use these tools, I rely on them for production output. Claude Code is how I resolve in-repo refactors and generate acceptance criteria at scale. I have built file-queue-based agent loops and orchestrated multi-agent workflows in n8n. When an engineer pitches an agentic solution I know which questions to ask and which promises to flag as architecture risk. I will not be the PM who approves an AI feature plan because the diagram looked confident.

I am based in Berlin, available on four weeks' notice, and open to discussing the scope and structure of the role in detail. Thank you for reading this far.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with 10+ years of delivery across fintech, regulated data platforms, defence AI, and B2B SaaS. Pattern of entry into complex, cross-functional environments, mapping the whole value chain, splitting teams where needed, and shipping against outcomes rather than output. Hands-on crypto trading experience across CEX and DEX venues, combined with deep AI-native tooling practice, makes the FNmarkets trading product domain a natural fit.

§ WHAT I CAN DO

Trading and fintech. Crypto market microstructure, perpetual futures, DEX/CEX mechanics, payment flow product design, P2P and PSP integration, regulatory-aware prioritisation, RICE and Kano.

Product craft. Continuous discovery, prototype-led validation, outcome negotiation, backlog and release ownership, SAFe at scale, metric definition before build.

AI-first building. Claude Code, GitHub Copilot, Lovable, Cursor, n8n multi-agent orchestration, agent frameworks, LLM-assisted spec generation.

Data and AI platforms. ETL orchestration, analytics platforms, multimodal AI training pipelines. Kafka, Python, Kotlin, Dagster, dbt, DuckDB, LLM agents.

Cloud, delivery and operations. Kubernetes, OpenShift, ArgoCD, Jenkins, GitOps, Docker, Azure DevOps.

Integration and platforms. Payment and forecourt systems, clinical interfaces, Shopware, WhatsApp/Telegram APIs.

Regulated environments. Defence, public sector, health data, insurance: identity management, audit and governance cycles.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one build; AI-native delivery via Claude Code, Lovable, and n8n agent workflows. WhatsApp/Telegram APIs.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Rollout time reduced from days to 30 minutes; product architecture shifted from UI-heavy to dev-code-friendly. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Bare-metal-to-container migration, UI relaunch, ETL migration. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Claims Center launched; 17-person team restructured into three mission-aligned squads with dedicated leads.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android; integrated the CGM/KIS clinical interface directly.

BUNDESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics and viral-mutation tracking. Identity management, highest-grade privacy.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION 2020 TO 2021

POS, payment, and forecourt systems. SAFe: PI planning, release trains.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019 TO 2020

Legacy webshop migrated to Shopware for ~20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation: end devices, servers, switches, software.

§ FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt (mobile payments, acquired by Sparkasse) · Qcrypt AG (quantum-resistant encryption, Product Owner) · Smart Soil Technologies (nanotech)
