

Philipp Hilbert. *GenAI product owner who has shipped it, not just pitched it.*

Positioning, ten years of product leadership across regulated, AI-native environments, now focused on owning the GenAI backlog end-to-end at scale.

To the hiring team at Discovered MENA,

I am applying for the Generative AI Product Owner role. The description asks for someone who has shipped GenAI products, not just presented on them, so let me be specific about what that means in my case. At construct8, where I am currently the product manager, the core product is built on LLM agents integrated with WhatsApp and Telegram APIs. I own the backlog, I write the user stories, I coordinate with engineering, and I track adoption after launch. That is the job you are describing.

Before that, at Rohde & Schwarz, I owned a multimodal AI data platform for the FCAS defence programme, the product that converts heterogeneous sensor and training data into a single homogeneous standard for AI model training. I steered the product away from a UI-heavy architecture toward a developer-friendly one by running structured discovery with the engineering team and presenting the case to senior defence stakeholders. Rollout time dropped from days to thirty minutes. That kind of outcome-over-output discipline is what I bring to a backlog.

The financial services context matters to me because I have worked in regulated environments before. At Bundesdruckerei, I owned the national health data platform for the RKI, vaccination statistics and viral-mutation tracking, with identity management and the highest privacy requirements in German public infrastructure. At Scheidt & Bachmann, I coordinated POS, payment, and forecourt system integration inside a SAFe programme with PI planning and release trains. Regulated means slower? It means more precise. I am comfortable in that room.

On the stakeholder coordination side: the role asks for someone comfortable with execs, engineers, and vendors simultaneously. At EMIL Group, I managed a seventeen-person team, diagnosed why delivery had stalled, and split the group into three nimble cross-functional teams with independent leads. The Claims Center launched on schedule. That restructuring decision required buy-in from the CTO, the engineering leads, and the business owners at the same time. It is not a skill I list, it is a pattern I repeat.

I am actively targeting the UAE and willing to relocate. The combination of a GenAI ownership mandate, a financial services context, and a team that is clearly serious about shipping rather than positioning makes this the kind of role I want to take next.

Best regards, *Philipp Hilbert*
