Dear talabat hiring team,

Payments infrastructure is where I have spent the sharpest part of my product career, from forecourt POS and payment system integration at Scheidt & Bachmann, to P2P consumer payment flows and PSP design, to co-founding Qcrypt where I owned encryption architecture and served as deputy IT security officer. When I read talabat's job description, intelligent routing, APM integrations, fraud prevention alongside authorisation rate optimisation, PCI-DSS compliance, I recognise the exact set of trade-offs I have been navigating professionally.

What draws me specifically to talabat is the scale and the regional complexity. Operating across nine MENA countries, each with its own payment culture, currency, and regulatory baseline, means the infrastructure layer has to be engineered for variance, not built once and assumed to transfer. At Rohde & Schwarz I faced an analogous challenge: a defence AI platform whose data formats, security requirements, and stakeholder expectations differed sharply by country and customer segment. I steered the product from a UI-heavy tool toward a dev-code-friendly integration standard, which cut rollout time from days to thirty minutes and made the system hotfix-capable without a release freeze. That instinct, finding the abstraction layer that handles local variation gracefully, is exactly what a multi-country payments engine needs.

At Scheidt & Bachmann I worked within SAFe across POS, payment, and forecourt systems, navigating the kind of cross-functional, compliance-heavy environment talabat's payments team operates in. At Bundesdruckerei I owned the national health data platform for the RKI, identity management, highest privacy standards, audit governance, so working where compliance is not optional is familiar terrain, not a constraint I would need to learn from scratch.

My working mode is AI-first. A disputed checkout flow becomes a testable prototype before the next standup. I write the spec, own the acceptance criteria, and instrument success before we build. I do not confuse output with outcome, and I do not let a roadmap become a commitment to the wrong thing, discovery and cheap experiments stay live throughout the lifecycle, not just at the start.

I am open to relocation to Dubai or Abu Dhabi, and I can be available on four weeks' notice. I would be glad to walk through specific payment scenarios, routing logic, APM edge cases, fraud signal design, in a technical conversation.

Best regards, *Philipp Hilbert*
