
Philipp Hilbert. *Growth PM with a conversion-rate obsession.*

Positioning, ten years shipping product in regulated marketplaces and B2B SaaS, now targeting funnel ownership where data drives the decision and experiments close the argument.

§ WHY DUBIZZLE

dubizzle occupies a rare position: a dominant classified brand with a genuine VAS revenue layer, inspections, financing, insurance, that is still underoptimised at the funnel level. The posting names choke-point identification across five distinct funnels using session recordings and behaviour analysis, which is exactly the structured discovery work I do rather than delegate. The combination of C2C classifieds trust and fintech/insurtech adjacent services creates an environment where marginal conversion improvements compound into meaningful revenue, not just cosmetic growth metrics. *That is exactly the environment where my strengths compound.*

§ HONEST FRAMING

My background is in B2B SaaS, health-tech, defence, and insurtech, not in a consumer classifieds marketplace specifically. The transferable mechanic is strong: I have run structured funnel analysis, A/B roadmaps, and conversion instrumentation in regulated, multi-stakeholder environments where the cost of a wrong experiment is high and the discipline of defining metrics before building is non-negotiable.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo spec and edge-case generation
 - **Lovable**, rapid clickable prototypes before engineering touches a ticket
 - **GitHub Copilot**, assisted delivery and code review
 - **Framer**, design-heavy flow mockups
 - **GPT**, requirements drafting and stakeholder briefs
 - **n8n**, agentic workflow automation
 - **Gamma.app**, business-case and PRD presentations
 - **II-Agent**, multi-step research and discovery automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Funnel and analytics instrumentation with GA4 and GTM; ETL orchestration with Dagster and dbt; Python and Kotlin for data pipeline work; Shopware e-commerce platform (full legacy-to-modern migration for ~20,000 users); WhatsApp and Telegram messaging APIs for lead capture beyond web forms; Kafka for event streaming; Kubernetes, ArgoCD and GitOps for rollout pipelines; PostgreSQL and MongoDB; Jira and Confluence for backlog and sprint management.

§ SIDE PROJECT

TRUE NORTH BERLIN TRUE-NORTH.BERLIN →

AI-native consulting practice built and operated as a live product experiment.

- Owns end-to-end client delivery from discovery through GitOps rollout, using LLM agents to compress the spec-to-prototype cycle.
- Architecture: file-queue-based agent loops orchestrated in n8n, with Claude Code handling in-repo refactors and Lovable generating front-end prototypes.
- Active engagement across construct8 marketplace (WhatsApp/Telegram API lead capture) and prior DMS implementations.
- Demonstrates the same zero-to-one, instrument-before-build discipline this role demands for new VAS funnel launches.

§ HOW I WOULD WORK AT DUBIZZLE

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit with GA4 and session recordings for each of the five VAS funnels, map every drop-off stage to a concrete hypothesis, and align with CRM and Marketing on which lead-quality signals they trust most before touching anything.

WEEK 2

Size and sequence.

Run RICE scoring across the hypothesis backlog, identify the two or three experiments with the highest confidence-to-effort ratio, and write the first PRDs so engineering has something to groom before the end of the sprint.

WEEK 3+

Ship, measure, repeat.

Launch the first A/B test, instrument the stage-level metrics in the dashboard, and run the first retrospective so learnings feed directly into the next prioritisation cycle rather than sitting in a slide deck.

I COVER LETTER

Dear dubizzle Hiring Team,

Funnel ownership sits at an uncomfortable intersection: it requires the analytical discipline to read a drop-off curve without jumping to conclusions, the product craft to turn a hypothesis into a clean experiment, and the cross-functional range to align CRM, design, and engineering on a shared north-star before anyone writes a line of code. I have spent the last several years doing exactly that, not always in a classifieds context, but always in environments where the wrong conversion assumption costs real money.

At EMIL Group I inherited a monolithic insurtech team of seventeen people producing slow output and unclear ownership. I split it into three nimble teams with designated leads, negotiated outcome-based metrics with stakeholders, and launched the Claims Center product, a funnel in its own right, where a user in distress has to move from first notice of loss to resolved claim without abandoning the flow. That work required session-level analysis of where users

stopped, iterative CTA and form changes, and tight coordination with the insurer partner on what a qualified lead actually meant downstream. The mechanics are identical to what dubizzle needs across its VAS funnels.

At Bundesagentur für Arbeit I owned the public analytics platform from a bare-metal server environment to a containerised, filterable, social-media-ready data product. The growth challenge there was discoverability and engagement, getting labour-market data in front of journalists, researchers, and policy teams who had no prior habit of using the platform. I ran the ETL migration, the UI relaunch, and the instrumentation in parallel, which taught me that funnel health dashboards are only as reliable as the event taxonomy underneath them. I would bring that same pipeline-level rigour to GA4 and GTM instrumentation at dubizzle.

The VAS scope, inspections, financing, insurance, evaluations, service contracts, maps closely to the insurtech and e-commerce work in my background. I have shipped inside regulated partner environments (insurers, public bodies, defence contractors) where the approval criteria and operational constraints of the integration partner shape what is feasible more than the engineering timeline does. I am familiar with that negotiation, and I know how to scope a bank or insurance partner integration so it ships rather than stalls in a procurement queue.

My working mode is AI-first: a disputed flow becomes a clickable Lovable prototype in a day; I do not write the production code, I own it end-to-end. That compresses the discovery-to-decision cycle significantly and means I can show CRM and Marketing a working mockup of a re-engagement flow before asking engineering to estimate it. I look forward to bringing that approach to dubizzle's growth agenda.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Ten years of product leadership across regulated B2B SaaS, insurtech, health-tech, and e-commerce, always in environments where conversion data drives the roadmap and experiments are the unit of progress. I negotiate outcomes with stakeholders, not output, and I define success metrics before the first sprint begins. My operating mode is AI-first: prototypes replace debates, and instrumentation replaces assumptions.

§ WHAT I CAN DO

Product craft. Continuous discovery, funnel and conversion optimisation, A/B and multivariate testing roadmaps, RICE/ICE prioritisation, outcome negotiation, backlog and release ownership, metric definition before build, PRD and user story authoring, SAFe (PI planning, release trains).

Integration and platforms. Payment and forecourt systems, e-commerce platforms (Shopware), clinical interfaces (CGM/KIS), messaging APIs (WhatsApp, Telegram), partner integrations (insurers, banks, public bodies).

Data and AI platforms. ETL orchestration, analytics platforms, funnel instrumentation. Kafka, Python, Kotlin, Dagster, dbt, GA4, GTM, LLM agents.

AI-first building. Claude Code, GitHub Copilot, Lovable, Framer, n8n, Gamma.app, GPT, II-Agent.

Cloud and delivery. Bare-metal to container migration, GitOps, rollout and hotfix pipelines. Kubernetes, OpenShift, ArgoCD, Jenkins.

Regulated environments. Defence, public sector, health data, insurance: identity management, audit and governance cycles, highest privacy requirements.

Working tools: Jira, Confluence.

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 · PRODUCT MANAGER · CONSTRUCTION MARKETPLACE, B2B SAAS 2025 TO NOW

Zero-to-one marketplace; AI-assisted operations; WhatsApp/Telegram lead-capture pipelines with LLM agents.

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI PLATFORM (FCAS), B2B SAAS 2024 TO 2025

Unified multimodal AI training data into one homogeneous standard; cut rollout time from days to 30 min, fully hotfix-capable; steered product from UI-heavy to dev-code-friendly. Kafka, Kotlin, Python.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC ANALYTICS PLATFORM 2023 TO 2024

Labour-market data made searchable, filterable and social-media-ready; bare-metal-to-container migration and big ETL migration. Dagster, dbt.

EMIL GROUP · PRODUCT MANAGER · INSURTECH LOW-CODE SAAS 2022

Launched Claims Center; restructured 17-person team into three nimble teams with leads; insurers now launch products in days, not months.

CLINET · PRODUCT OWNER · HEALTH-TECH MOBILE APP 2021 TO 2022

Native iOS/Android; integrated CGM/KIS clinical interface personally.

BUNDESDRUCKEREI · PRODUCT OWNER · NATIONAL HEALTH DATA PLATFORM (RKI) 2021

RKI projects DIM and DESH: vaccination statistics, viral-mutation tracking; identity management, highest privacy.

SCHEIDT & BACHMANN · PRODUCT OWNER · FUEL-RETAIL INTEGRATION 2020 TO 2021

POS, payment, forecourt systems; SAFe: PI planning, release trains.

AOK ITSCARE · PROXY PRODUCT OWNER · PROCUREMENT PLATFORM 2019 TO 2020

Full legacy-to-Shopware migration for ~20,000 users.

ENERCON · PROJECT LEAD · IT MODERNISATION, WIND ENERGY 2019

Full site modernisation: end devices, servers, switches, software.

§ FOUNDER & EARLY-STAGE EXPERIENCE

Kvitt (mobile payments, acquired by Sparkasse) · Qcrypt (quantum encryption, Product Owner) · Smart Soil Technologies (nanotech)
