Dear Hiring Team,

I am applying for the Product Owner role at Halian in Abu Dhabi. I am an EU citizen relocating to the UAE: Abu Dhabi on-site, five days a week, is not a concession, it is the posting characteristic that made me apply first.

The role description names the exact failure modes I have spent ten years fixing. Backlog that is not well-prioritized, requirements that arrive as decrees rather than outcomes, engineering and business stakeholders operating with fundamentally different mental models of what is being built. At EMIL Group I inherited a seventeen-person team producing too little too slowly and split it into three focused teams with dedicated leads, delivery velocity and team ownership both improved measurably. At Bundesdruckerei I owned the RKI national health data platform under Germany's highest privacy and identity management requirements, coordinating across compliance, engineering, and public-sector governance simultaneously. At Scheidt & Bachmann I operated inside SAFe at scale, running PI planning and release trains across multiple teams and keeping forecourt payment integrations aligned across a complex stakeholder landscape.

The posting's preference for healthcare, health-tech, or insurance experience is a direct match. Four of my six most recent roles sit in those industries: Bundesdruckerei's RKI vaccination and viral-mutation tracking platform, CLINET's native iOS/Android health app where I integrated the CGM/KIS clinical interface myself, EMIL Group's low-code InsurTech SaaS, and AOK ITSCare's procurement platform serving approximately 20,000 users. I understand what makes regulated environments different, not just the audit cycles and compliance gates, but the stakeholder dynamics that come with them, where a change that is technically trivial can be politically complex.

I work AI-first in practice, not in slides. A disputed flow becomes a clickable Lovable prototype the same day; I do not write production code, I own it end-to-end. That means my discovery cycles are faster and my handoffs to engineering are more precise, user stories arrive with acceptance criteria stress-tested against edge cases I generated with LLM assistance before the story was ever written. I use Jira, Miro, and Figma daily and have been doing so for years.

I would welcome the opportunity to discuss the role in more detail. I am available for a call at short notice and can relocate within four weeks of an offer.

Best regards, *Philipp Hilbert*
