

Philipp Hilbert. *Senior Product Manager, Agentic Enablement.*

Positioning, platform-first agentic PM who has shipped production AI systems, owned data and payment infrastructure in regulated environments, and personally rebuilt how work happens around autonomous tooling.

§ WHY REAP

Reap is doing something rare: treating AI enablement as a company-level infrastructure problem rather than a department-level productivity initiative. The framing, "we build the rails, the org builds on them", is exactly the right abstraction, and the explicit mandate to move teams from pasting into ChatGPT to running always-on agents is a problem I have spent the last two years solving in practice. The combination of stablecoin-powered payments, a regulated balance sheet, and a global distributed team means the constraints are real, the data surfaces are interesting, and the governance problems are not decorative. *That is precisely the environment where infrastructure-first agentic thinking compounds fastest.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and agent harness iteration
- **GitHub Copilot**, specification and edge-case generation
- **Cursor / VSCode**, daily driver for workflow tooling
- **Lovable**, rapid front-end prototyping and stakeholder demos
- **n8n**, agentic workflow orchestration and connector design
- **GPT**, eval loop design and structured output extraction
- **Gamma.app**, internal communications and enablement decks

- **Framer**, design-heavy interface prototypes

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Production work spans Python, Kotlin (Spring Boot), PostgreSQL, MongoDB, REST APIs, Kafka, Kubernetes, OpenShift, Docker, ArgoCD, GitOps, Jenkins, CI/CD, Dagster, dbt, ETL pipeline design, GitLab, Azure DevOps, Django, and SQL, across regulated environments in defence AI, public-sector analytics, insurance SaaS, healthcare, and fintech payments.

§ SIDE PROJECT

CONSTRUCT8 [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Two-sided B2B construction staffing marketplace, built zero-to-one alone using LLM agents across the entire funnel.

- Anonymity-until-payment model protecting both firms and workers until commitment is confirmed.
- WhatsApp and Telegram as the primary product surface; LLM agents handle matching, qualification, and follow-up unattended.
- Funnel and conversion analysis in SQL; one person runs the day-to-day because agents carry the operational load.
- Direct proof-of-concept for the "self-serve agentic platform" pattern Reap is building: the agent runs the operation, the human handles exceptions.

§ HOW I WOULD WORK AT REAP

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow operations, customer success, and engineering at Reap to map where onboarding, payment resolution, and internal workflows currently stall, building the impact-ranked list of where agentic capability changes what the customer actually experiences.

WEEK 2

Slice, rank, validate.

Take the top two or three candidate flows and run rapid structured discovery: existing tooling inventory, data access blockers, and a first draft of the eval criteria that would prove the agent is production-ready.

WEEK 3+

Ship the pattern.

Drive the first end-to-end always-on workflow, live, with evals behind it, so the graduation ladder for the next one already exists before the first one ships.

I COVER LETTER

Dear Reap hiring team,

I have spent the last two years doing exactly what this role describes: rebuilding how work happens around agents rather than automating steps inside processes designed for humans. At construct8, I built and ran a two-sided B2B marketplace as a single operator because I designed the agent layer, qualification, matching, follow-up, to run unattended, with routing to me only when a decision required judgment. At Rohde & Schwarz, I instrumented two competing developer workflows on the FCAS AI and data platform and let the data kill the one that looked better: the UI-led design recorded exactly zero clicks, and redirecting the roadmap based on that finding increased pipeline runs by 200%. These are not AI experiments; they are production systems with evals, observable failure modes, and feedback loops.

What draws me to Reap specifically is the platform framing. The distinction between "we build agents for everyone" and "we build the rails and the org builds on them" is the whole strategy, and you have named it precisely. I have watched teams adopt tooling they did not ask for only when the on-ramp is self-serve and the first win is fast, which is why the curated skills library, working templates, and clear path-to-started matter more than the sophistication of the underlying orchestration. The hardest part of this job is the adoption motion, not the build.

I also bring directly relevant regulated-environment experience. At the Bundesagentur für Arbeit I owned a national labour-market analytics platform as Deputy IT Security Officer: data governance, auditability, and permissioning were not gates bolted on at the end, they were the design constraints that determined what we could ship and when. At EMIL Group I ran an insurance SaaS platform for insurers, reinsurers and underwriters where accuracy and traceability were non-negotiable. At Kvitt Payment Solutions I took a mobile P2P payments product to acquisition inside the girocard ecosystem. The regulated balance sheet at Reap is not a new constraint for me; it is the normal operating environment.

On the fintech and stablecoin side: I have eight years of hands-on crypto experience including infrastructure-level engagement with cross-border payments, stablecoin mechanics, DEX aggregation, and cross-chain bridging. I actively trade and manage assets across Hyperliquid, Bitget, Jupiter, and Across Protocol, and I study execution infrastructure, custody, routing, price impact, and settlement, as a practitioner rather than a spectator. The intersection of stablecoin-powered payments and agentic automation is not an abstract aspiration for me; it is the domain I find most technically interesting right now.

I would bring to Reap a track record of shipping production agentic systems, a disciplined platform mindset, fluency in regulated data environments, and the evangelist energy to make adoption the metric rather than delivery. I would be glad to discuss how my experience maps to your specific roadmap.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product manager with 13 years of ownership in regulated industries, fintech, defence AI, public-sector analytics, insurance, and healthcare. I build platform-first agentic systems that teams actually adopt: I have shipped production LLM agent infrastructure, owned regulated data platforms as Deputy IT Security Officer, and taken a payments product to acquisition. My work is characterised by ruthless prioritisation, data-driven roadmap decisions, and the discipline to build reusable foundations rather than one-off automations.

§ WHAT I CAN DO

AI Products and Tooling: LLM agents, agentic workflows, prompt and context engineering, evaluation loops, human-in-the-loop design, AI governance, EU AI Act, Explainable AI (XAI); full prototyping with Claude Code, GitHub Copilot, Cursor, Lovable

Platform and Data: ETL, Dagster, dbt, PostgreSQL, Kafka, funnel and churn analysis, KPI definition, Matomo, MicroStrategy

Product Management: continuous discovery, product vision and roadmap, prioritisation, MVP definition, PoC, A/B testing, user research and interviews, prototyping, product lifecycle management, go-to-market support

Product Ownership: requirements engineering, user stories, acceptance criteria, definition of done, backlog refinement, sprint planning, velocity and burndown, UAT, Jira, Confluence, Figma, Miro

Agile and Scaled Delivery: Agile, Scrum, Kanban, SAFe, ART, PI planning

SDLC and Delivery: GitOps with ArgoCD, CI/CD, Jenkins, containerised environments, regression and end-to-end test automation, same-day hotfix paths, release gating

Technical Environments: Kubernetes, OpenShift, Docker, GitLab, Azure DevOps, REST APIs, Python, Kotlin, Django, SQL, PostgreSQL, MongoDB

Governance and Business: GDPR, Deputy IT Security Officer, identity management, budget ownership, ROI reasoning, Insurance and regulated-domain compliance

Stakeholder and Leadership: cross-functional team leadership, C-level reporting, workshop facilitation, conflict resolution, change management

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI 2024-2025

Internal AI and data platform for the FCAS European programme. Championed GitOps delivery with ArgoCD, cutting rollout from days to 30 minutes; redirected roadmap based on instrumented workflow data, lifting pipeline runs 200%; led 15+ engineers and data scientists through Scrum.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC SECTOR ANALYTICS 2023-2024

National labour-market data platform. Integrated test automation into Jenkins, introduced Dagster and dbt saving ~75% per data update, containerised a bare-metal system, carried a full UI relaunch and ETL migration. Deputy IT Security Officer.

CLINET PLATFORMS · PRODUCT OWNER · HEALTHCARE 2023

Mobile patient app, iOS/Android. Cut roadmap to top 10% of features; user acceptance rose fivefold. Implemented CGM/KIS interface: digital anamnesis time from 30 minutes to 5.

EMIL GROUP · PRODUCT MANAGER · INSURANCE SAAS 2022

B2B platform for insurers, reinsurers, brokers and underwriters. Restructured 18-person delivery org into three lean teams; attrition fell from near-total exodus to one departure. Shipped Claims Center concept-to-production; cut new insurance product time-to-market from months to under one week.

SCHEIDT & BACHMANN · PRODUCT OWNER · RETAIL & PAYMENTS 2021-2022

POS and forecourt systems. Moved research to production in a full SAFe setup with agile release trains and PI planning.

BUNDESDRUCKEREI · PRODUCT OWNER (INTERIM) · GOVERNMENT 2021

Secure data platform. Data structures and identity management for Robert Koch Institute programmes DIM and DESH.

AOK ITSCARE · PRODUCT OWNER · HEALTH INSURANCE 2019-2020

B2B procurement webshop. Migrated legacy system to Shopware for three AOK insurers and ~20,000 employees; still in production.

WALDBURG-ZEIL KLINIKEN · PRODUCT OWNER · HEALTHCARE 2017-2018

Clinical network. Wifi infrastructure rollout across nine hospitals.

§ FOUNDER & EARLY-STAGE EXPERIENCE

CONSTRUCT8 · FOUNDER AND PRODUCT MANAGER · CONSTRUCTION STAFFING 2025-2026

Zero-to-one two-sided B2B marketplace. LLM agents across the funnel; anonymity-until-payment model; WhatsApp and Telegram as product surface; one operator runs the day-to-day.

QCRYPT AG · CO-FOUNDER AND PRODUCT OWNER · IT SECURITY 2016-2021

Quantum-secure encryption hardware and software. Shipped a three-layer product installing in under two minutes. Later Chair of the board.

KVITT PAYMENT SOLUTIONS · FOUNDER AND CFO · FINTECH PAYMENTS 2013-2018

Mobile group-based P2P payments product. Built from zero to acquisition: acquired and operated by Sparkasse inside the girocard ecosystem.

SMART SOIL TECHNOLOGIES · CO-FOUNDER, CDO AND CFO · AGRITECH 2018-2021

Nanotechnology fertiliser product, laboratory to investor rounds. Owned financial planning and investor reporting.
