

Philipp Hilbert. *Senior Product Manager, Agentic Enablement.*

Positioning, platform-first agentic PM who has shipped production AI systems, owned data and payment infrastructure in regulated environments, and personally rebuilt how work happens around autonomous tooling.

Dear Reap hiring team,

I have spent the last two years doing exactly what this role describes: rebuilding how work happens around agents rather than automating steps inside processes designed for humans. At construct8, I built and ran a two-sided B2B marketplace as a single operator because I designed the agent layer, qualification, matching, follow-up, to run unattended, with routing to me only when a decision required judgment. At Rohde & Schwarz, I instrumented two competing developer workflows on the FCAS AI and data platform and let the data kill the one that looked better: the UI-led design recorded exactly zero clicks, and redirecting the roadmap based on that finding increased pipeline runs by 200%. These are not AI experiments; they are production systems with evals, observable failure modes, and feedback loops.

What draws me to Reap specifically is the platform framing. The distinction between "we build agents for everyone" and "we build the rails and the org builds on them" is the whole strategy, and you have named it precisely. I have watched teams adopt tooling they did not ask for only when the on-ramp is self-serve and the first win is fast, which is why the curated skills library, working templates, and clear path-to-started matter more than the sophistication of the underlying orchestration. The hardest part of this job is the adoption motion, not the build.

I also bring directly relevant regulated-environment experience. At the Bundesagentur für Arbeit I owned a national labour-market analytics platform as Deputy IT Security Officer: data governance, auditability, and permissioning were not gates bolted on at the end, they were the design constraints that determined what we could ship and when. At EMIL Group I ran an insurance SaaS platform for insurers, reinsurers and underwriters where accuracy and traceability were non-negotiable. At Kvitt Payment Solutions I took a mobile P2P payments product to acquisition inside the girocard ecosystem. The regulated balance sheet at Reap is not a new constraint for me; it is the normal operating environment.

On the fintech and stablecoin side: I have eight years of hands-on crypto experience including infrastructure-level engagement with cross-border payments, stablecoin mechanics, DEX aggregation, and cross-chain bridging. I actively trade and manage assets across Hyperliquid, Bitget, Jupiter, and Across Protocol, and I study execution infrastructure, custody, routing, price impact, and settlement, as a practitioner rather than a spectator. The intersection of stablecoin-powered payments and agentic automation is not an abstract aspiration for me; it is the domain I find most technically interesting right now.

I would bring to Reap a track record of shipping production agentic systems, a disciplined platform mindset, fluency in regulated data environments, and the evangelist energy to make adoption the metric rather than delivery. I would be glad to discuss how my experience maps to your specific roadmap.

Best regards, *Philipp Hilbert*
