

Philipp Hilbert. *Senior Product Manager, Search, Discovery & Personalization.*

Positioning, ten years shipping customer-facing products in fast-moving, data-intensive environments, ready to own the full search and discovery CX for Amazon Now MENAT.

Dear Amazon Now Hiring Team,

Quick commerce lives or dies on discovery. If a customer types "sparkling water" and your search returns still water with a promoted placement and three out-of-stock items, the session is over. The MENAT market is growing faster than the tooling that serves it, and Amazon Now is at exactly the moment when owning search relevance, ranking, and personalization end-to-end becomes a compounding advantage rather than a hygiene factor. That is the problem I want to work on.

I have spent ten years shipping products in environments where the cost of a wrong decision is visible in a number the next morning. At Rohde & Schwarz, I owned an AI and data platform for the FCAS defence programme: I instrumented two competing developer workflows, found that the beautiful UI-led design had recorded exactly zero clicks, and redirected the entire roadmap. Pipeline runs increased 200%. At the Bundesagentur für Arbeit, I migrated a national labour-market analytics platform from bare metal to containers, rebuilt the ETL layer with Dagster and dbt, and cut data-update time by 75%, all while carrying a full UI relaunch in parallel. Both roles required writing clear requirements, driving cross-functional alignment with engineering and data science teams, and making decisions with data rather than consensus.

The AI-native execution requirement in this role is not aspirational for me, it is current practice. I draft PRFAQs and edge-case matrices with Claude and GPT, prototype UX flows in Lovable and Framer before a designer is in the room, and build agentic pipelines in n8n to automate the research and synthesis work that typically queues up a team for days. At construct8, my construction staffing marketplace, LLM agents handle the entire top-of-funnel qualification loop; one person runs what would otherwise require a small operations team. I bring that same acceleration instinct to search and personalization: faster spec cycles, faster experiment designs, faster read-outs.

Amazon's experimentation culture is the specific capability I most want to operate inside. I have run A/B tests and instrumented competing workflows before, but I have not had access to the scale and rigour of Amazon's experimentation framework. I am honest about that. What I bring is the discipline to design an experiment so that the result is unambiguous, the speed to move from signal to decision without waiting for a meeting, and the stakeholder management to get engineering and science aligned on the interpretation rather than the politics.

I am based in Berlin, hold EU citizenship, and am actively targeting the UAE, I am ready to relocate to the MENAT region on short notice. I would be glad to discuss the role further at your convenience.

Best regards, *Philipp Hilbert*
