

Philipp Hilbert. *Technical Product Owner, Airline Engineering & MRO.*

Positioning, ten years owning complex, regulated backlogs end-to-end, from defence AI and public-sector analytics to insurance and payments, ready to bring that rigour to Emirates' MRO and Digital Aircraft domain.

Dear Emirates Group IT Recruitment Team,

The Technical Product Owner role in the Airline Engineering, MRO and Digital Aircraft domain is the kind of position I have been preparing for through thirteen years of product ownership in complex, regulated environments. Emirates' explicit requirement for a TPO who can hold backlog quality across feature work, Technical Debt, non-functional requirements, BAU, and ceremonies simultaneously, while contributing to PI Planning in a scaled SAFe environment, maps directly to the multi-layer backlog discipline I have applied at Rohde & Schwarz, the Bundesagentur für Arbeit, and EMIL Group.

At Rohde & Schwarz I was the Product Manager for an internal AI and data platform supporting the FCAS European defence programme. I owned the backlog across a cross-functional team of 15+ engineers and data scientists, ran Scrum ceremonies in Jira and Confluence, and championed GitOps delivery with ArgoCD that reduced rollout time from days to 30 minutes. Critically, I redirected the entire product strategy based on workflow instrumentation: the beautiful UI-first approach recorded exactly zero clicks; the developer-code-first path increased pipeline runs by 200%. That is the kind of evidence-based prioritisation a TPO in a high-stakes domain needs to make credible trade-offs between feature velocity and technical rigour.

At EMIL Group I restructured an 18-person delivery organisation that was losing both its senior engineers and client trust. I formed three lean teams with their own leads, reduced attrition from near-total exodus to a single departure, and shipped the Claims Center from concept to production. The acceptance criteria and story sign-off discipline I built there, ensuring every story was prepared on time, refined with the whole team, and prioritised in alignment with adjacent backlogs, is the same discipline the Emirates posting describes as the TPO's core accountability.

My education reinforces the fit: I hold a Diplom-Wirtschaftsingenieur (Industrial Engineering and Management, equivalent to a Master's degree) from Technische Universität Berlin, with a specialisation in Logistics. The combination of engineering rigour, operational systems thinking, and hands-on product delivery is the profile the MRO domain demands. I also bring e-Commerce product delivery experience from the AOK ITSCare Shopware migration, where I owned backlog refinement, user stories, and acceptance criteria for a procurement platform serving roughly 20,000 employees.

I am an EU citizen, hold no visa sponsorship requirements in the EU, and am genuinely willing to relocate to Dubai, the Emirates posting is a positive fit on location, not a compromise. I would welcome the opportunity to discuss how my background translates into the MRO and Digital Aircraft context.

Best regards, *Philipp Hilbert*
