

Philipp Hilbert. *Trading PM for a platform where execution quality is the product.*

Positioning, fintech operator with 13 years of cross-functional delivery, a live backtesting engine and active perpetuals trading, joining the team that defines what FundedNext's brokerage experience feels like.

Dear Hiring Team at NEXT Ventures,

FundedNext's proposition is a structural bet: that the best way to grow a trading platform is to make losing the platform's problem, not the trader's. That bet only pays off if the product between the trader and their P&L is frictionless, trustworthy, and fast enough to disappear. Writing the specification for that product, across MT5, cTrader, and internal operations tooling, is the kind of work I want to do.

I bring 13 years of end-to-end product ownership in regulated environments: insurance claims infrastructure at EMIL Group, national labour-market analytics for the Federal Employment Agency, AI data platform delivery for the FCAS defence programme, and fintech from the earliest stage, I built Kvitt Payment Solutions from zero to acquisition by Sparkasse inside the girocard ecosystem. What these roles share is a recurring pattern: a cross-functional team, a complex integration dependency, a compliance constraint, and a user who is paying attention to every second of latency. That is the pattern this role fits.

My engagement with crypto and trading markets is hands-on and infrastructure-oriented. I actively trade perpetuals on Hyperliquid, route spot orders through Jupiter and 1inch, and use Coinglass and Hyblock Capital for liquidation heatmap analysis and market structure work. I have built a personal backtesting engine (phoenix882) in Python and developed Hyperion, a pipeline reconstructing marginal prices over merit-order data for balancing-power markets. I am not describing interest, I am describing a daily practice that produces the kind of intuitions that make discovery interviews faster and acceptance criteria sharper.

On the technical side, the job description names API collaboration, database fluency, and AI literacy as requirements. I have owned platform integrations at the API level across healthcare (CGM KIS interface), public sector (Dagster and dbt data pipelines), and DevOps (GitOps rollout that cut deployment time from days to thirty minutes). I use Claude, GPT, and GitHub Copilot in my daily workflow, not as productivity shortcuts but as instruments for spec generation, edge-case enumeration, and rapid prototyping. I can distinguish a feasible agent integration from an impressive-sounding one because I have built several of each.

I am relocating to or available in Dubai, and I am prepared to work fully on-site. I would welcome the chance to talk through how my background maps to the specific product challenges FundedNext is working on right now.

Best regards, *Philipp Hilbert*
